

CENTERED AROUND YOU

ENERGY REDUCTION PLAN

The Cobo Center management team is fully committed to an energy conservation program that is focused on three key elements:

- infrastructure improvements
- automation & technology
- vigilance

Significant Improvements to Cobo Center's mechanical, electrical and plumbing infrastructure has reduced energy consumption throughout the facility.

Cobo Center is fully automated with lighting levels and HVAC delivery specifically scheduled to coincide with event hours, as well as the technological monitoring capability to adjust to a changing exterior environment that impacts conditions inside the venue.

The SMG Management Team at Cobo Center tracks every unit of electricity, steam, natural gas, and water consumed at the facility and monitors trends against past history and the budget to make adjustments in real time to reduce usage where practical and appropriate.
